

# Serial Composition

---

## Background

Serial compositions are based on a row that the composer decides upon in advance. To create a serial row, the composer places all twelve notes of the chromatic scale in an order of her choosing, making sure that none are repeated. Serial (or twelve-tone) compositions replace traditional harmony and counterpoint by basing both chords and melodies on this row. By combining inverted and retrograded (backwards) forms of the row, composers can use up to 48 permutations of the original row.

There are two very different uses of this technique in the anthology:

- Webern Quartet - 'classic' serialism which is very strict and austere but has the same sort of beauty as a crystal with its tightly organized structure
  - Goldsmith music from *Planet of the Apes* - much looser use of serialism in order to create threatening music for this sci fi film.
-

# Serial Composition

## Webern – Quartet Op. 22 (p. 160 in the anthology)

The serial material used in this piece is outlined in the matrix below. The original row is P0 (prime form), and the 11 possible transpositions can be read from left to right (P1, P10 etc.). The primes are laid out in a funny order to allow the inversions to be put in the same matrix. There are also twelve retrogrades (read from right to left), inversions (read from top to bottom) and retrograde inversions (read from bottom to top).

### Explanation of serial matrix

Abbr.	Term	Explanation
P	Prime	The <b>original</b> form of the row P0 is the un-transposed row (starting on C) from which everything is worked out. P1 is the same series of pitches transposed up one semitone, P2 is transposed up two semitones etc.
R	Retrograde	The <b>backwards</b> form of the row. R0 is P0 but played starting from the end and working back to the beginning. The retrogrades are read from the right to the left of the matrix.
I	Inversion	The <b>mirror</b> form of the row. If P goes up a semitone, for example, its inversion will go down a semitone. Inversions are read down the columns of the matrix. I0 is the inversion starting on the same note as P0, I1 is transposed up a semitone etc.
RI	Retrograde inversion	The <b>mirror</b> form of the row but <b>backwards</b> . RI0 is I0 but played starting from the end. Retrograde inversions are read backwards from the bottom to the top of the matrix

# Serial Composition

Webern writes his quartet as a series of mirror canons. A mirror canon is like a normal canon but the imitating part is inverted. In a serial piece this means that a prime form of the row is played in canon (i.e. in staggered entries) with an inversion. This relatively simple technique looks more complicated on the score because Webern keeps swapping the line from one instrument to another. This can be seen in the example below, from the opening. The canon starts in the saxophone with an inversion (I1), imitated in mirror form in the violin (P11). These lines then both pass to the piano before passing back to the sax and violin, after which they overlap in the clarinet part before going back to the piano:

The image displays a handwritten musical score for Webern's quartet, illustrating a mirror canon. The score is written for four instruments: Violin, Clarinet in Bb (at concert pitch), Tenor Saxophone (at concert pitch), and Piano. The tempo is marked "Sehr mässig" with a metronome marking of ca. 36. The key signature is one flat (Bb). The score shows the following sequence of events:

- The canon begins in the Tenor Saxophone with an inversion of the row, labeled (I1).
- The violin enters with a mirror form of the row, labeled P11.
- Both parts then move to the piano.
- The parts return to the saxophone and violin.
- The lines overlap in the clarinet part.
- The canon concludes in the piano.

Handwritten annotations in red ink highlight the specific row forms: (I1) for the saxophone and P11 for the violin and piano. The piano part includes markings for "pizz." (pizzicato) and "arco" (arco). The score is marked with "pp" (pianissimo) and "p" (piano).

# Serial Composition

The whole piece is structured in this way as follows:

## Introduction (bb. 1-5)

- Mirror canon passes between instruments in *Klangfarben* melody (P11/I1)
- Introduces main rhythmic ideas that then dominate the piece

## A – Exposition (bb. 5-15)

- Saxophone plays melody (P1/P7 overlapping on G at end of bar 10)
- Accompaniment is mirror canon passing between piano and violin/clarinet (P5/I7 & I1/P11)

## B – Development (bb. 16-27)

- Starts with mirror canon (I10 / P2) passing between instruments
- Passing between instruments intensifies in bar 20 (P1/I11), reaching maximum textural density at the end of bar 22 (P0/I0)
- Accompaniment is mirror canon passing between piano and violin/clarinet

## A' – Recapitulation (bb. 28-37)

- Same row forms as in exposition but now with 'melody' (P1) distributed across top three instruments accompanied by piano in mirror canon on the other pairs of rows (P5/I7 & I1/P11).
- 

ACTION: try constructing your own row matrix and then writing some contrapuntal music based upon it. There are lots of online tools for generating row matrices, for example <http://composertools.com/Tools/matrix/MatrixCalc.html>

# Serial Composition

## Goldsmith – *Planet of the Apes* (p. 388 in the anthology)

The film composer Jerry Goldsmith uses serial techniques in much looser way in order to create the sense of an unknown and dangerous world in his film score for *Planet of the Apes*. In this film, some astronauts crash on a planet on which apes dominate a race of mute humans. The alien and frightening atmosphere of this world is evoked by the strange dissonant music.

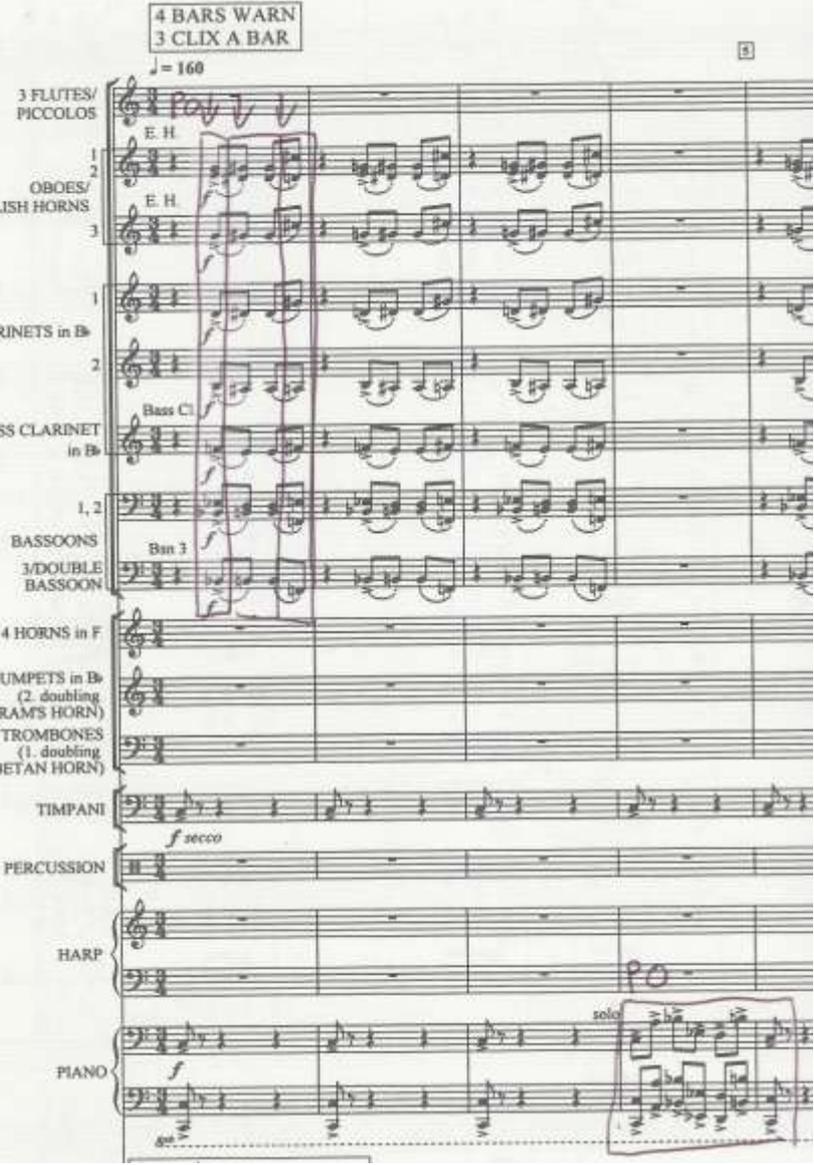

Goldsmith creates chords as well as melodies from the row. For example, the four-note chords (tetrachords) in the strings at the opening help to create the dissonant and uncomfortable harmonic language.

However, Goldsmith modifies the modernist technique of serialism by using row fragments (rather than whole rows), repeated notes (which are usually avoided in by serial composers) and ostinato. In combination, these modifications create clearer tonal centres (see table above). The harsh dissonances created by serial techniques perhaps become easier to assimilate without losing their dramatic impact, particularly as the tonal centres show some relatively traditional relationships (C to G are tonic and dominant, and Eb is a third away, a common relationship in Romantic music). He also writes sections and lines that are not strictly serial, which also helps to give some parts of the music a rather more traditional feel. The matrix of possible row forms that Goldsmith might use is shown below (see explanation of row matrix for Webern on p. 2 above for more details):

	I <sub>0</sub>	I <sub>9</sub>	I <sub>10</sub>	I <sub>3</sub>	I <sub>2</sub>	I <sub>11</sub>	I <sub>1</sub>	I <sub>8</sub>	I <sub>6</sub>	I <sub>7</sub>	I <sub>4</sub>	I <sub>5</sub>	
P <sub>0</sub>	C	A	Bb	Eb	D	B	C#	G#	F#	G	E	F	R <sub>0</sub>
P <sub>3</sub>	Eb	C	C#	F#	F	D	E	B	A	Bb	G	G#	R <sub>3</sub>
P <sub>2</sub>	D	B	C	F	E	C#	Eb	Bb	G#	A	F#	G	R <sub>2</sub>
P <sub>9</sub>	A	F#	G	C	B	G#	Bb	F	Eb	E	C#	D	R <sub>9</sub>
P <sub>10</sub>	Bb	G	G#	C#	C	A	B	F#	E	F	D	Eb	R <sub>10</sub>
P <sub>1</sub>	C#	Bb	B	E	Eb	C	D	A	G	G#	F	F#	R <sub>1</sub>
P <sub>11</sub>	B	G#	A	D	C#	Bb	C	G	F	F#	Eb	E	R <sub>11</sub>
P <sub>4</sub>	E	C#	D	G	F#	Eb	F	C	Bb	B	G#	A	R <sub>4</sub>
P <sub>6</sub>	F#	Eb	E	A	G#	F	G	D	C	C#	Bb	B	R <sub>6</sub>
P <sub>5</sub>	F	D	Eb	G#	G	E	F#	C#	B	C	A	Bb	R <sub>5</sub>
P <sub>8</sub>	G#	F	F#	B	Bb	G	A	E	D	Eb	C	C#	R <sub>8</sub>
P <sub>7</sub>	G	E	F	Bb	A	F#	G#	Eb	C#	D	B	C	R <sub>7</sub>
	R <sub>0</sub>	R <sub>9</sub>	R <sub>10</sub>	R <sub>3</sub>	R <sub>2</sub>	R <sub>11</sub>	R <sub>1</sub>	R <sub>8</sub>	R <sub>6</sub>	R <sub>7</sub>	R <sub>4</sub>	R <sub>5</sub>	R <sub>15</sub>

# Serial Composition

An example of how Goldsmith uses the row can be seen right at the beginning of the piece. The ostinato in the wind parts (doubled in lower strings not shown) consists of three four-note chords. Each chord consists of three notes from the prime form of the row P0. So the first chord is C, A, B $\flat$ , E $\flat$  (the first four notes), the second is D, B, C $\sharp$ , G $\sharp$  (the second four notes) and so on. Goldsmith gives the ostinato a sense of a tonal centre by adding the repeated Cs in the timpani and piano. The ostinato is interrupted in bar four but a new idea, which will later also be an ostinato, which consists of the first six notes of P0:

4 BARS WARN  
 3 CLIX A BAR

# Serial Composition

Over the page, Goldsmith transposes the six-note idea from bar 4 to create a new ostinato, which is this time the first six notes of P7. He repeats the first two notes (G and E) in the right hand of the piano to give it a tonal centre, again underpinning this with a G bass note in the lower strings. Against this, the violins enter very quietly with a C# from the beginning of R8, the next three notes of which are used to create a dissonant flourish in the xylophone, doubled in the upper woodwind (not shown).

The image shows a handwritten musical score for several instruments. The staves from top to bottom are: Percussion (Perc.), Harp (Hp.), Piano (Pno.), Violin I/II (In I/II), Viola (Vla.), Violoncello (Vc.), and Double Bass (Db.).

- Percussion:** Features a xylophone flourish labeled "Xylo" and "R8 Cont." with a handwritten note "bc".
- Piano:** Features a six-note ostinato in the left hand, labeled "P7" and "marcato". The right hand has a melodic line.
- Violin I/II:** Features a melodic line starting with a C# and marked "R8". Dynamics include "enter *ppp* then *crescendo molto*" and "div.".
- Viola and Violoncello:** Both have melodic lines with dynamics "div. pizz." and "f".
- Double Bass:** Features a bass line with dynamics "pizz." and "f".

A final way in which Goldsmith gives this serial material a more traditional feel is the relationships between sections in terms of their tonal centres. The opening ten bars are centred around C and then the following section, shown here, is centred around G, suggesting a tonic-dominant relationship.

Over the page is a table summarising the musical depiction of the action in this piece – use it to explore further ideas.

**ACTION:** Generating a row matrix (<http://composertools.com/Tools/matrix/MatrixCalc.html>) and use it to create some music for a scene for a horror or sci-fi film.

# Serial Composition

Bar	Action	Musical Features (including use of row)	Tonal centre
1	Mutes start running ...	<i>Ostinato 1</i> (3 tetrachords from P0) with piano interruptions at b. 4 (P0 1 <sup>st</sup> hexachord) and b. 8 (P0 entire)	C
8	- humans start running	- heterophonic link bar (not based on row)	
11	Chase continues ...	First hexachord of P7 turned into piano <i>Ostinato 2</i> (each note alternates with repeating E/G dyad) <i>Interjection figure</i> on strings ending in 3-note flourish (R8: b. 11 - 1 <sup>st</sup> tetrachord; b. 15 - 2 <sup>nd</sup> tc; b. 19 - 3 <sup>rd</sup> tc)	G
16		- new cross rhythm in congas	
22	- beaters start		
23	Beaters appear ...	<i>Ostinato 2</i> in wind and harp (P3) R10 against it in bassoon. <i>Interjection figure</i> on trombone ending in cluster (P3)	Eb
26		- stop for one bar of <i>Ostinato 1</i> (P3)	
27	- mutes turn and run	- <i>Ostinato 2</i> restarts now with R18 in bassoons	
30	- humans stop	- stop for two bars of <i>Ostinato 1</i> (P3)	
32	- humans turn and run	- <i>Ostinato 2</i> restarts, now I3 in bassoons	
35		- stop for three bars of <i>Ostinato 1</i> (P3)	
38	Cuts to mutes fleeing ...	<i>Ostinato 2</i> (P3)	Eb-
39		- <i>Ostinato 2</i> (P6)	D?
40		- R2 moves down orchestra in sustained notes to build a 12-tone chord	
42	- guns fire	- stabbing 12 note chord (descending three note motif in trumpets)	
44	- humans drop to floor	- descending 5-note chromatic scale	
45	Panicked running ...	<i>Ostinato 2</i> (P0) returns but is now 8 notes long. Against it there is a pointillistic texture incl. xylophone [vn. and xylo. play P11]	C
52	Apes wheel round to face camera ...	Motivically derived ideas: rams horn plays rising fifth; ascending semitone motif in bass	Eb
55	- horses spurred into action	- rising chromatic scale to triplet ostinato in semitones around G and other heterophonically similar elements [galloping horse cliché]	
59	Chase continues ...	<i>Ostinato 2</i> (P7 – 8-note version) on piano details picked out in lower strings emphasize G. <i>Interjection figure</i> on trumpets end in flourish (R2: b. 63 - 1 <sup>st</sup> tc; b. 67 – 2 <sup>nd</sup> tc; b. 71 – 3 <sup>rd</sup> tc) False harmonics on violin electric harp	G
74	First net sets trap ...	Dissonant two-part counterpoint. R10 is distributed across parts. Vibraslap starts.	?
84	Second net lifted on ape command ...	<i>Ostinato 3</i> (loosely based on row) starts up in lower strings against insistent semitone clashes in upper strings and woodwind [fades out]	D?
